

# The Game of Invention

Be surprised  
what you can  
invent today

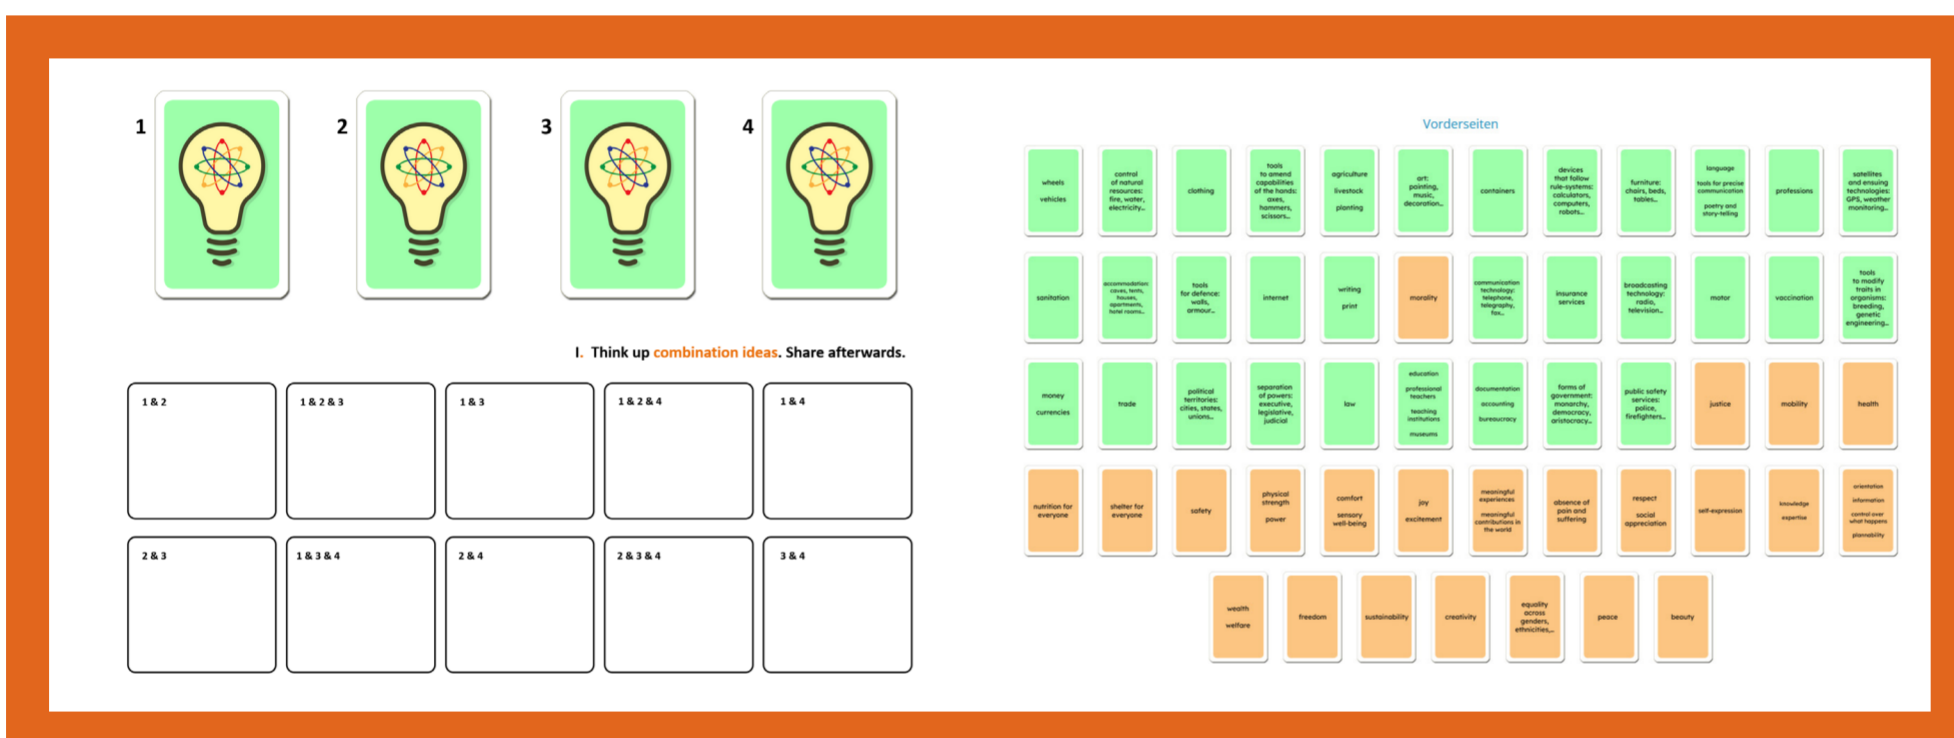

## WHY conduct this project?

Innovation research has led to many insights on the development of inventions.

How does this help in practice? In the Game of Invention, you get to try seven different mechanisms for making inventions yourself.

Play the game and you will probably have enough ideas for 10 patents to file in the next year (because you are such a good inventor).

Quick access to resources

## WHAT are the outcomes and tools you can use?

The game is available in print and free for you to download.

Invent new things individually and in teams.

Be surprised what you can invent based on randomly assigned basic ideas and values.

The aim of the game is to have fun, to think up some really interesting ideas, and to develop your creative spirit.

## WHOM to contact?

If you want to learn more about this project, please reach out to [neurodesign@hpi.de](mailto:neurodesign@hpi.de).

The Principle Investigators in this project are Dr. Julia von Thienen and Prof. Dr. Christoph Meinel.
