How many presidents has the United States had - trivia question ... History text books and history professors will all tell you that the first ...

Motivation

- How many presidents do the USA have?
 - 44
 - List of names in chronological order

40	Ronald Reagan ^{[3][4]}	Actor & broadcaster, President of the Screen Actors Guild ^[5]
41	George H. W. Bush	Pilot (Navy Lieutenant, Junior Grade), ^[6] Businessman (Oil) ^[7]
42	Bill Clinton	Lawyer, Law lecturer
43	George W. Bush	Businessman (Oil, ^[8] baseball) ^[9]
44	Barack Obama	Public Interest professional, Lawyer, Constitutional Law Professor [10]

(http://en.wikipedia.org/wiki/List_of_Presidents_of_the_United_States_by_occupation)

Motivation

- Information retrieval
 - Keywords (short input)
 - Document (long output)
- Question Answering
 - Natural language question (long input)
 - Short answer (short output)

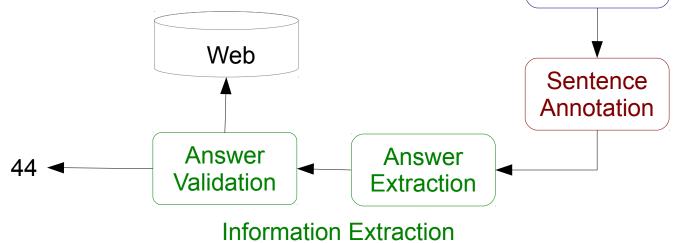

QA Types

- Closed-domain
 - Answer questions from a specific domain
- Open-domain
 - Answer any domain-independent question

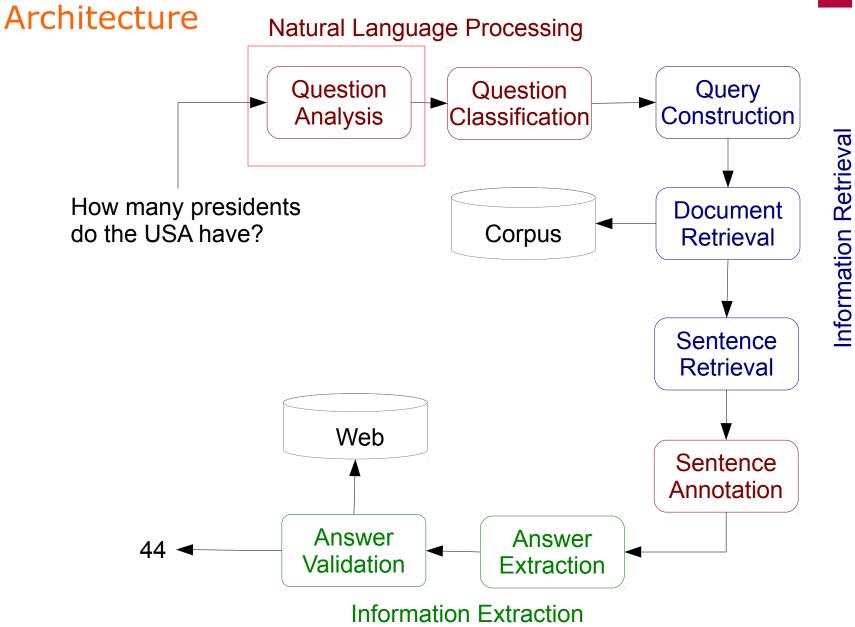

Information Retrieval

Architecture Natural Language Processing Question Query Question Analysis Classification Construction How many presidents Document Corpus do the USA have? Retrieval Sentence Retrieval

Question Analysis

- Named-Entity Recognition
- Surface Text Pattern Learning
- Syntactic Parsing
- Semantic Role Labeling

Question Analysis: Named-Entity Recognition

- Recognize the named entities in the text to extract the target of the question
- Use the question's target in the query construction step
- Example:
 - Question: "In what country was Albert Einstein born?"
 - Target: "Albert Einstein"

Question Analysis: Pattern Learning

- Extract a pattern from the question
- Match the pattern with a list of pre-defined question patterns
- Find the corresponding answer pattern
- Realize the position of the answer in the sentence in the answer extraction step

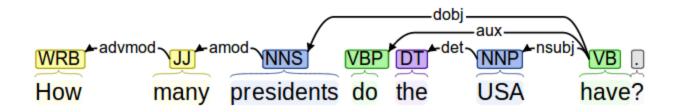

Question Analysis: Pattern Learning

- Example:
 - Question: "In what country was Albert Einstein born?"
 - Question Pattern: "In what country was X born?"
 - Answer Pattern: "X was born in Y."

Question Analysis: Syntactic Parsing

- Use a dependency parser to extract the syntactic relations between question terms
- Use the dependency relation paths between question terms to extract the correct answer in the answer extraction step

Question Analysis: Semantic Role Labeling

- Find the question's head verb
- Example:
 - "Who_[Buyer] purchased YouTube_[Goods]?"
- Commerce_buy predicate

- The Buyer wants the Goods and offers Money to a Seller in exchange for them. Jess BOUGHT a coat.
 - Lee **BOUGHT** a textbook from Abby.

Goods [Gds]

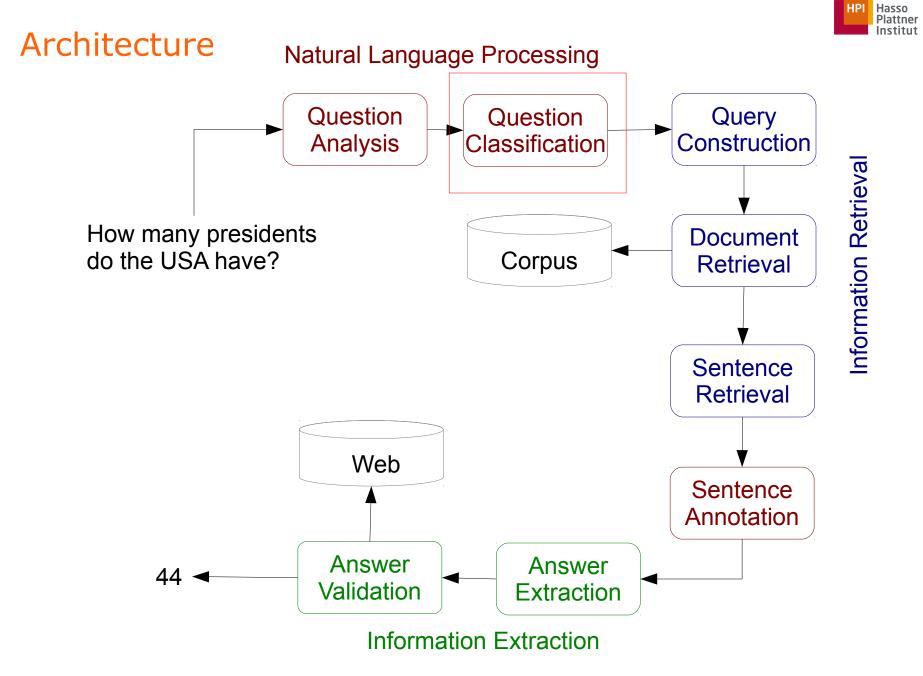

The FE Goods is anything (including labor or time, for example) which is exchanged for Money in a transaction. Only one winner PURCHASED the paintings

(https://framenet2.icsi.berkeley.edu/fnReports/data/frameIndex.xml?frame=Commerce_buy)

Question Analysis: Semantic Role Labeling

- COMMERCE-BUY
 - buy (v), buyer (n), purchase (n), purchase (v), purchaser (n)
- Identify candidate passages
 - Buyer [Subj,NP] verb Goods [Obj,NP]
 - Buyer [Subj,NP] verb Goods [Obj,NP] Seller [Dep,PP-from]
 - Goods [Subj,NP] verb Buyer [Dep,PP-by]
 - ...
- Example:
 - "In 2006, YouTube_[Goods] was purchased by Google_[Buyer] for \$1.65 billion."

- Classify the input question into a set of question types
- Map question types to the available named-entity labels
- Find strings that have the same type as the input question in the answer extraction step
- Example:
 - Question: "In what country was Albert Einstein born?"
 - Type: LOCATION Country

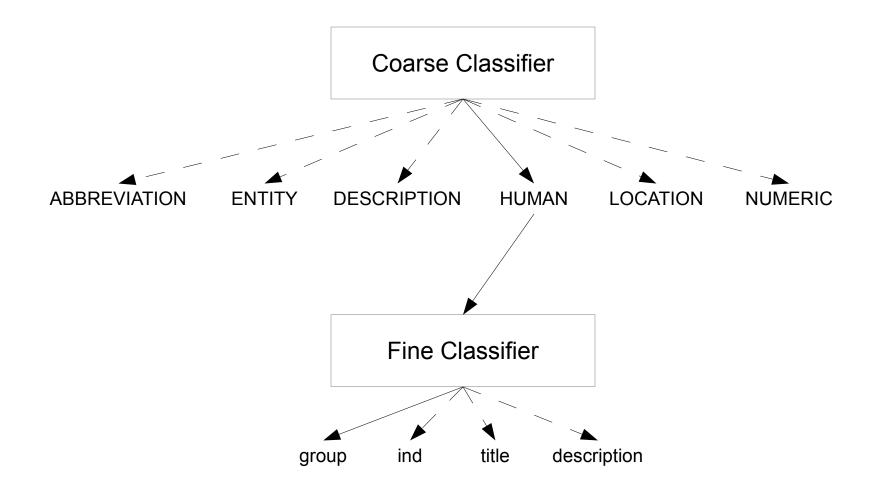

- Example (NER):
 - S1: " Albert Einstein was born in 14 March 1879 ."
 - S2: " Albert Einstein was born in Germany ."
 - S3: "Albert Einstein was born in a Jewish family."

- Classification taxonomies
 - BBN
 - Pasca & Harabagiu
 - Li & Roth
 - 6 coarse- and 50 fine-grained classes
 - ABBREVIATION
 - ENTITY
 - DESCRIPTION
 - HUMAN
 - LOCATION
 - NUMERIC

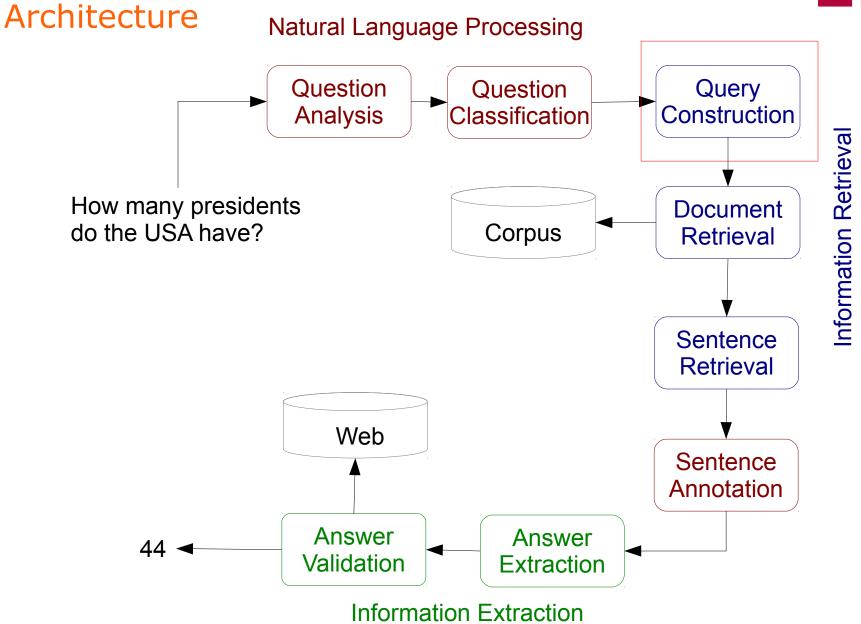

- Rule-based
- Machine learning-based
- Considering the confidence measure of the classification to decide the category

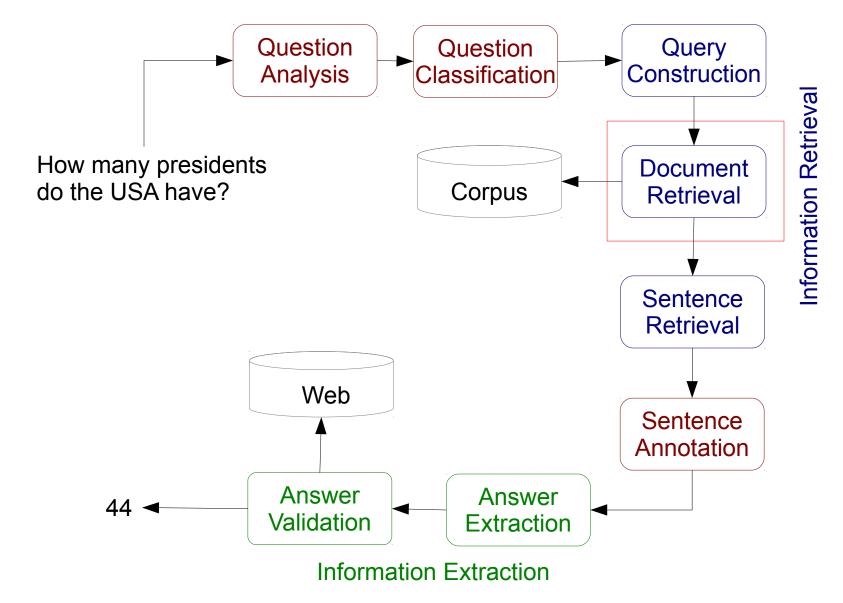

Query Construction

- Goal:
 - Formulate a query with a high chance of retrieving relevant documents
- Task:
 - Assign a higher weight to the question's target
 - Use query expansion techniques to expand the query

Architecture Na

Natural Language Processing

Document Retrieval

- Importance:
 - QA components use computationally intensive algorithms
 - Time complexity of the system strongly depends on the size of the to be processed corpus
- Task:
 - Reduce the search space for the subsequent components
 - Retrieve relevant documents from a large corpus
 - Select top "n" retrieved documents for the next steps

Document Retrieval

- Use available information retrieval models
 - Vector Space Model
 - Probabilistic Model
 - Language Model
- Use available information retrieval toolkits: Lucene, Lemur, Sors, ElasticSearch, etc.

How many presidents do the USA have?

Document Corpus Retrieval Sentence Retrieval Web Sentence Annotation Answer Answer 44 · Validation Extraction

Information Extraction

- Task:
 - Find small segments of text that contain the answer
- Benefits beyond document retrieval:
 - Documents can be very large
 - Documents span different subject areas
 - The relevant information is expressed locally
 - Sentences simplifies the answer extraction step
- Main problem: sentence brevity

- Information retrieval models for sentence retrieval
 - Vector Space Model
 - Probabilistic Model
 - Language Model
 - Jelinek-Mercer Linear Interpolation
 - Bayesian Smoothing with Dirichlet Prior
 - Absolute Discounting

- Support from named-entity recognition and semantic role labeling
 - "Albert Einstein was born in 14 March 1879 ."
 - " Albert Einstein was born in Germany ."
 - "Albert Einstein was born in a Jewish family."
 - Buyer [Subj,NP] verb Goods [Obj,NP]
 - Buyer [Subj,NP] verb Goods [Obj,NP] Seller [Dep,PP-from]
 - Goods [Subj,NP] verb Buyer [Dep,PP-by]

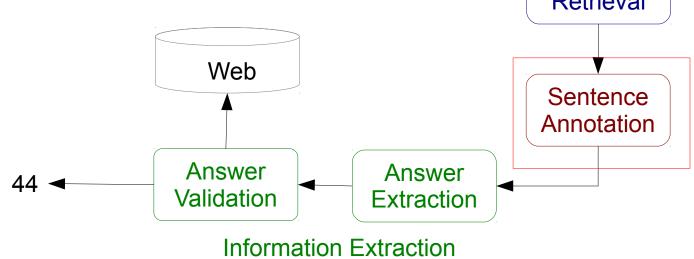

- Supervised learning
 - Features
 - Number of entity types of the right type
 - Number of question keywords
 - Longest exact sequence of question keywords
 - Rank of the document
 - Proximity of the keywords (shortest path)
 - N-gram overlap between passage and question

Architecture Natural Language Processing Question Query Question Analysis Classification Construction How many presidents Document Corpus do the USA have? Retrieval Sentence Retrieval

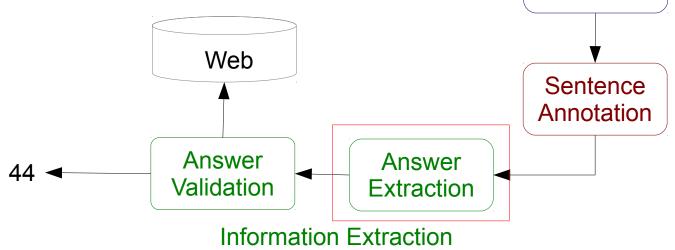

Sentence Annotation

- Similar to Question Analysis
- Annotate relevant sentences using linguistic analysis
 - Named-entity recognition
 - Syntactic parsing
 - Semantic role labeling

Information Retrieval

Architecture Natural Language Processing Question Query Question Analysis Classification Construction How many presidents Document Corpus do the USA have? Retrieval Sentence Retrieval

- Extract candidate answers based on various information:
 - Question
 - Question Analysis: patterns
 - Question Analysis: syntactic parser
 - Question Analysis: semantic roles
 - Question Classification: question type
 - Sentence
 - Sentence Annotation: all annotated data

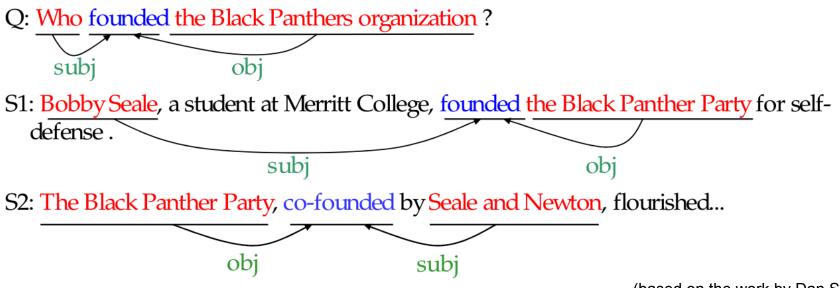

- Use extracted patterns
- Example:
 - Question: "In what country was Albert Einstein born?"
- Question Pattern: In what country was X born?
- Answer Pattern: X was born in Y.
- Example (Pattern):
 - S1: "Albert Einstein was born in 14 March 1879."
 - S2: "Albert Einstein was born in Germany."
 - S3: "Albert Einstein was born in a Jewish family."

- Use question type and entity type
- Example:
 - Question: "In what country was Albert Einstein born?"
 - Question Type: LOCATION Country
- Example (NER):
 - S1: "Albert Einstein was born in 14 March 1879."
 - S2: "Albert Einstein was born in Germany."
 - S3: "Albert Einstein was born in a Jewish family."

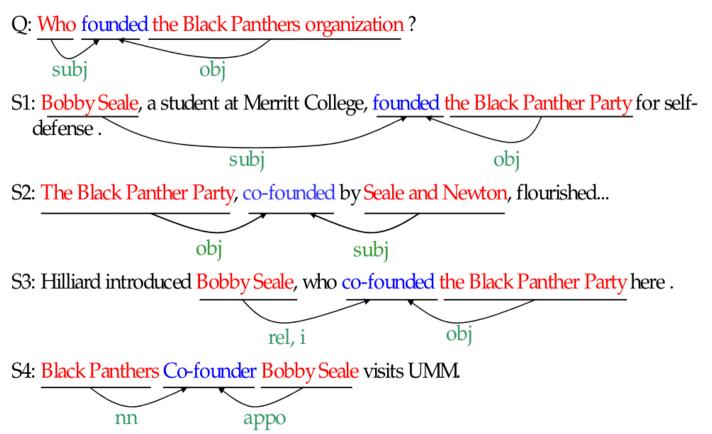

- Use syntactic parsing
 - Different wordings possible, but similar syntactic structure

(based on the work by Dan Shen)

- Use syntactic parsing
 - Many syntactic variations \rightarrow need robust matching approach

(based on the work by Dan Shen)

- Use semantic roles
- Example:
 - "Who_[Buyer] purchased YouTube?_[Goods]"
- Example:
 - " In 2006, YouTube_[Goods] was purchased by Google_[Buyer] for \$1.65 billion."

Answer

Validation

Information Extraction

Answer

Extraction

44 ·

- Use the Web as a knowledge resource for validating answers
- Required steps
 - Query creation
 - Answer rating

- Query creation
 - Combine the answer with a subset of the question keywords
 - Choose different combinations of subsets
 - Bag-of-Word
 - Noun phrase chunks
 - Declarative form

- Example:
 - Question: "In what country was Albert Einstein born?"
 - Answer Candidate: Germany
- Queries:
 - Bag-of-Word:
 - Albert Einstein born Germany
 - Noun-Phrase-Chunks:
 - "Albert Einstein" born Germany
 - Declarative-Form:
 - "Albert Einstein was born in Germany"

- Answer rating
 - Evaluate the query in a search engine
 - Analyze the result of the search engine
 - Count the results
 - Parse the result snippets
 - Other possibilities:
 - Use knowledge bases to find relations between the question keywords and the answer, e.g., WikiData

Deep learning (end-to-end architecture)

Master thesis of Georg Wiese

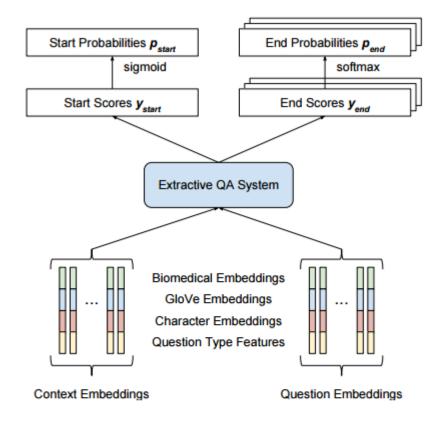

Figure 1: Network architecture of our system for biomedical question answering. At its core, it uses an extractive neural QA system as a black box (we use FastQA (Weissenborn et al., 2017)). The embedding layer is modified in order to include biomedical word embeddings and question type features. The output layer is adjusted to add the ability to answer list questions in addition to factoid questions.
