ABSTRACT
This poster shows a zoo with selected representatives of the (big) data engineering jungle. The animals are separated in different compounds so that only creatures of the same species live together. Every animal has a sign providing information about its characteristics and skills. I also tried to point to the problems we have discussed in lecture which come along with every technology animal.

So the viewer gets a general overview of data engineering technologies that are necessary to build a state-of-the-art product. The shown solutions point to the underlying problems which determine the discipline of data engineering and processing of data at big scales. Finally one gets an impression of problems that engineers face in the real world when companies use these technologies.
