Data Quality: Problems

Felix Naumann
Information Integration
Winter 2019/20

Classification of Errors

Erhard Rahm, [Hong Hai Do](#): Data Cleaning: Problems and Current Approaches. [IEEE Data Eng. Bull.](#) 23(4): 3-13 (2000)

DQ-Problems: Effects

- Incorrect prices in inventory retail databases [English 1999]
 - Costs for consumers 2.5 billion \$
 - 80% of barcode-scan-errors to the disadvantage of consumer
- IRS 1992: almost 100,000 tax refunds not deliverable [English 1999]
- 50% to 80% of computerized criminal records in the U.S. were found to be inaccurate, incomplete, or ambiguous. [Strong et al. 1997a]
- US-Postal Service: of 100,000 mass-mailings up to 7,000 undeliverable due to incorrect addresses [Pierce 2004]

**IRS might
be after you
— to mail
you a check**

Incorrect addresses
stall nearly 1,500
Tennessee refunds

By **BONNA de la CRUZ**
Staff Writer

Now that Tilcia L. Meniffee knows that she'll be getting \$500 in a tax refund from Uncle Sam, she can do some Christmas shopping, she said.

Information Integration
Winter 2019/20

Content-based IQ Criteria

- ...concern the actual data.
- Accuracy
 - is the extent to which data is correct, reliable, and certified free of error. [WS96]
- Completeness
 - is the extent to which data is not missing and is of sufficient breadth, depth, and scope for the task at hand. [WS96]
- Customer support
 - is the amount and usefulness of human help via email or telephone.
- Documentation
 - is the amount and usefulness of documents with metadata.
- Interpretability
 - is the extent to which data is in appropriate languages, symbols, and units, and the definitions are clear. [WS96]
- Relevancy (or relevance)
 - is the extent to which data is applicable and helpful for the task at hand. [WS96]
- Reliability
 - is the degree to which the user can trust the information
- Value-Added
 - is the extent to which data is beneficial and provides advantages from its use. [WS96]

Technical IQ Criteria

- ...concern software and hardware.
- Accessibility (or availability)
 - of a DBMS is the probability that a feasible query is correctly answered in a given time range.
 - Is the extent to which data are available or easily and quickly receivable [WS96].
- Latency
 - is the amount of time in seconds from issuing the query until the first data item reaches the user
- Price (cost effectiveness)
 - is the amount of money a user has to pay for a query.
 - is the extent to which the cost of collecting appropriate data is reasonable [WS96].
- Response time
 - measures the delay in seconds between submission of a query by the user and reception of the complete response from the IS.
- Security
 - is the extent to which access to data is restricted appropriately to maintain its security [WS96].
- Timeliness
 - is the extent to which the age of the data is appropriate for the task at hand [WS96].

Intellectual IQ Criteria

- ...concern subjective aspects.
- Believability
 - is the extent to which data is regarded as true, real, and credible [WS96].
- Objectivity
 - is the extent to which data is unbiased, unprejudiced, and impartial [WS96].
- Reputation
 - is the extent to which data is trusted or highly regarded in terms of its source or content [WS96].

Instantiation-related IQ Criteria

- ...concern the presentation of retrieved data.
- Amount of data
 - is the extent to which the quantity or volume of available data is appropriate [WS96].
- Representational conciseness
 - is the extent to which data is compactly represented without being overwhelming [WS96].
- Representational consistency
 - is the extent to which data is always represented in the same format and are compatible with previous data [WS96].
- Understandability (ease of understanding)
 - is the extent to which data are clear without ambiguity and easily comprehended [WS96].
- Verifiability (traceability, lineage)
 - Is the extent to which data are well documented, verifiable, and easily attributed to a source [WS96].

Questionnaires

All items are measured on a 0 to 10 scale where 0 is not at all and 10 is completely. Items labels with “(R)” are reverse coded.

Accessibility. (4 items, Cronbach’s Alpha=.92)

- This information is easily retrievable.
- This information is easily accessible.
- This information is easily obtainable.
- This information is quickly accessible when needed.

Appropriate Amount. (4 items, Cronbach’s Alpha=.76)

- This information is of sufficient volume for our needs.
- The amount of information does not match our needs. (R)
- The amount of information is not sufficient for our needs. (R)
- The amount of information is neither too much nor too little.

Believability. (4 items, Cronbach’s Alpha=.89)

- This information is believable.
- This information is of doubtful credibility. (R)
- This information is trustworthy.
- This information is credible.

Completeness. (6 items, Cronbach’s Alpha=.87)

- This information includes all necessary values.
- This information is incomplete. (R)
- This information is complete.
- This information is sufficiently complete for our needs.
- This information covers the needs of our tasks.
- This information has sufficient breadth and depth for our tasks.

Data Cleansing Tasks – Profiling

- Data source discovery
 - Metadata
 - UDDI / matchmaking
- Schema discovery
 - Schema matching and mapping
 - Profiling for metadata (keys, foreign keys, data types, ...)
- Data discovery
 - Column-level: Null-values, domains, patterns, value distributions / histograms
 - Table-level: Data mining, rules

Data Cleansing Tasks – Cleaning

- Extraction from sources
 - Technical and syntactic obstacles
- Transformation
 - Schematic obstacles
- Standardization
 - Syntactic and semantic obstacles
- Duplicate detection
 - Similarity functions
 - Algorithms
- Data fusion / consolidation
 - Semantic obstacles
- Loading into warehouse / presenting to user

Integration and Cleansing: ETL

Human Interaction is Needed

- Components to implement
 - Wrappers for technical heterogeneity
 - Schema integration based on correspondences
 - Similarity measure for schema elements
 - Similarity measure for records
- Knobs to turn
 - Thresholds for similarity measures
 - Partition size / window size
- Expert guidance
 - Rule selection / rule specification
 - Schema matching
 - Duplicate detection
 - Data fusion

'Resurrected,' but still wallowing in red tape

Government records incorrectly kill off thousands, and there's no easy fix

By **Alex Johnson and Nancy Amons**

Reporters

MSNBC and NBC News

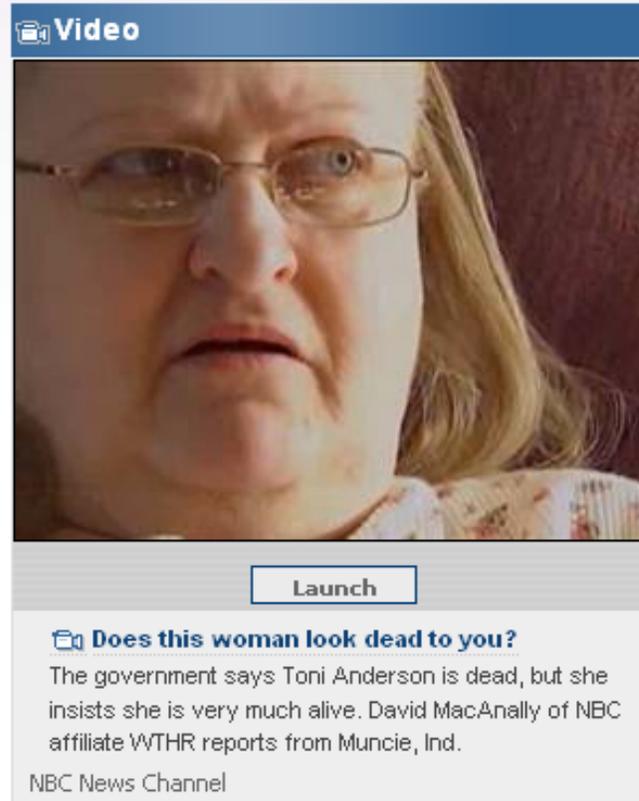

updated 6:21 p.m. ET Feb. 29, 2008

For a dead woman, Laura Todd is awfully articulate.

"I don't think people realize how difficult it is to be dead when you're not," said Todd, who is very much alive and kicking in Nashville, Tenn., even though the federal government has said otherwise for many years.

Todd's struggle started eight years ago with a typo in government records. The government has reassured her numerous times that it has cleared up the confusion, but the problems keep coming.

[Story continues below ↓](#)

Video

Launch

Does this woman look dead to you?

The government says Toni Anderson is dead, but she insists she is very much alive. David MacAnally of NBC affiliate WTHR reports from Muncie, Ind.

FRANKREICH

Telefonkundin erhält Rechnung über 63 Millionen Euro

Als eine Französin aus Lothringen unlängst ihre Telefonrechnung bekam, blieb ihr buchstäblich die Spucke weg: 63 Millionen Euro sollte sie begleichen. Dabei hatte sie ursprünglich nur um Korrektur einer Abrechnung in Höhe von 67 Euro gebeten.

Paris - "Da muss wohl ein Komma verrutscht sein", zitiert "Le Figaro" heute den Vizedirektor der französischen Telefongesellschaft Télé2, Olivier Anstett. Die Kundin aus dem Ort Herserange in der Nähe von Metz hatte sich zunächst über einen ihrer Meinung nach zu hohen Rechnungsbetrag von 67,69 Euro bei der Telefongesellschaft beschwert. Als eine Antwort ausblieb, schickte sie einen zweiten Brief. Daraufhin erhielt sie eine "korrigierte" Rechnung über die Summe 63.280.067,96 Euro.

"Uns bleibt nur, uns bei der Kundin zu entschuldigen und dafür zu sorgen, dass so etwas nie wieder vorkommt", so der lapidare Kommentar des Vizechefs von Télé2.

Property mistakenly valued at \$189 million

By rcrav
Created 12/03/2007 - 4:46pm

Property mistakenly valued at \$189 million results in tax adjustments in county

An \$18,900 Waconia property that was mistakenly valued at \$189 million is “throwing a wrench” into property tax statements and the Carver County budget. County officials issued a press release Monday detailing the problem that came to light last week.

An error was identified in the estimated market valuations used to calculate Pay 2008 Proposed Property Taxes, according to the release. The County Assessor’s Office placed an incorrect estimated market value on a parcel located in the city of Waconia, apparently resulting in extra zeroes being added to the value.

The mistake results in an imbalance in the amount of property taxes the county was expecting to collect. The mistake added about \$900,000 in expected revenue, according to County Administrator David Hemze.

The county is planning to consider recommendations to cut the 2008 budget by \$900,000 so that proposed property taxes will match tax notices sent to residents in November.

“It kind of threw a wrench into everything,” said Hemze. “It’s unfortunate. It’s a mistake and we’re concentrating on responding to the mistake and trying to ensure that it doesn’t happen again.” If the county does not cut the budget by \$900,000, the county portion of property taxes would go up for all properties in the county. The effect would be greatest in Waconia, but Hemze said the average-valued home outside of Waconia would also experience a \$29 increase on top of the number indicated on the November tax notices.

Redaktionell lieblos erweitert, 22. Januar 2009

Von [Thomas Georg Maria Mainka](#) - [Alle meine Rezensionen ansehen](#)

Zuerst das positive: Gegenüber der 2006er Ausgabe ist die Software deutlich stabiler geworden. Abstürze, die man mit Affengriff und Taskmanager beseitigen muß, kommen glücklicherweise nicht mehr vor.

Ansonsten hat sich an der Software so gut wie nichts geändert.

Redaktionell mußte ich jedoch feststellen, daß die Anzahl an Doubletten (also Doppeleinträge ein und des selben Films mit geringfügigen abweichenden Daten wie Laufzeitunterschiede von 1 Minute, oder 35mm ./.. Video bzw. teilweise unvollständigen Darsteller- bzw. Filmstab-Listen) deutlich zugenommen haben. (Zumindestens ist mir dies bei den Märchenfilmen - meinem privaten Sondersammelgebiet - besonders aufgefallen)

[Für Kunden: Stellen Sie Ihre eigenen Bilder ein.](#)

 **Mary:** Hi, my name is Mary. How may I help you?

 **Felix Naumann:** Hi, I am Felix

 **Felix Naumann:** I am area editor of "Information System".

 **Mary:** Hello Felix, how can I help you today?

 **Felix Naumann:** I would like to assign a reviewer to a submission. The reviewer is already registered twice in the system. Once with an old email adress, and once with an incorrect name. The person is Barbara Pernici.

 **Mary:** Ok, did you want me to merge her accounts?

 **Felix Naumann:** Sure, merging her accounts would be a first step. The correct email address is barbara.pernici@polimi.it and of course her name is "Barbara Pernici" and not "Barbara Barbara Pernici".

 **Felix Naumann:** Can you let me know, once the files are corrected. Thank for your help!

 **Mary:** Her name has been corrected and the accounts merged.

 **Mary:** Is there anything else I can help you with?

 **Felix Naumann:** No, perfect. Thanks, Mary.

 **Mary:** You are welcome Felix.

 **Mary:** It was a pleasure assisting you today. If you require any further assistance please contact us again. To close this chat session, please click the Close button in the top corner of this chat window.

The mystery of Ireland's worst driver

Details of how police in the Irish Republic finally caught up with the country's most reckless driver have emerged, the Irish Times reports.

He had been wanted from counties Cork to Cavan after racking up scores of speeding tickets and parking fines.

Poles are Ireland's largest immigrant population

However, each time the serial offender was stopped he managed to evade justice by giving a different address.

But then his cover was blown.

It was discovered that the man every member of the Irish police's rank and file had been looking for - a Mr Prawo Jazdy - wasn't exactly the sort of prized villain whose apprehension leads to an officer winning an award.

In fact he wasn't even human.

"*Prawo Jazdy* is actually the Polish for driving licence and not the first and surname on the licence," read a letter from June 2007 from an officer working within the Garda's traffic division.

"Having noticed this, I decided to check and see how many times officers have made this mistake.

"It is quite embarrassing to see that the system has created Prawo Jazdy as a person with over 50 identities."

The officer added that the "mistake" needed to be rectified immediately and asked that a memo be circulated throughout the force.

In a bid to avoid similar mistakes being made in future relevant guidelines were also amended.

And if nothing else is learnt from this driving-related debacle, Irish police officers should now know at least two words of Polish.

As for the seemingly elusive Mr Prawo Jazdy, he has presumably become a cult hero among Ireland's largest immigrant population.

ABSTRACT

We provide an analysis of the adoption of metadata standards on the Web based on a large crawl of the Web. In particular, we look at what forms of syntax and vocabularies publishers are using to mark up data inside HTML pages. We also describe the process that we have followed and the difficulties involved in web data extraction.

1. INTRODUCTION

Embedding metadata inside HTML pages is one of the ways to publish structured data on the Web, often preferred by publishers and consumers over other methods of exposing structured data, such as publishing data feeds, SPARQL endpoints or RDF/XML documents. Publishers prefer this method due to the ease of implementation and maintenance: since most webpages are dynamically generated, adding markup simply requires extending the template that produces the pages. Consumers such as search engines are already accustomed to processing HTML and extraction

are a number of factors that complicate the comparison of results. First, different studies use different web corpora. Our earlier study used a corpus collected by Yahoo!'s web crawler, while the current study uses a dataset collected by the Bing crawler. Bizer et al. analyze the data collected by <http://www.commoncrawl.org>, which has the obvious advantage that it is publicly available. Second, the extraction methods may differ. For example, there are a multitude of microformats (one for each object type) and although most search engines and extraction libraries support the popular ones, different processors may recognize a different subset. Unlike the specifications of microdata and RDFa published by the RDFa, the microformat specifications are also rather informal and thus different processors may extract different information from the same page. Further, even if the same information is extracted, the conversion of this information to RDF may differ across implementations. Third, different extractors may be lenient in accepting particular mistakes in the markup, leading to more or less information extracted.

Me – a duplicate

Dear CMT Support,

I noticed that the April/May Revision tracks have two records for meta reviewer, Felix Naumann. I tried to delete them and add him again, but each time the system produced two entries for him. This problem doesn't exist for other tracks. Can you look into the reason? Thank you.

Chen
