

# CompleteClean

The new flossophy!

The Complete Clean offers a new perspective on personal dental hygiene. It promotes better dental hygiene habits by making flossing more approachable. The system transforms the time spent cleaning your teeth into a rich multimedia experience.

## ● Flossing

Flossing is critical for effective dental hygiene but is too often skipped in people's daily routines. The Complete Clean floss spooler addresses this need by making flossing more comfortable and convenient. The device is easily controlled from the handle, removing the awkward motions of traditional flossing. A single spooler holds enough floss for 2+ months in one integrated package.

## ● Tracking

The tracking system follows your brushing movements to display which teeth you have brushed completely. Based on optical sensors and accelerometer data, brushing activity in 30 separate regions of the mouth is tracked.

## ● Mirror Interface

The mirrored display seamlessly integrates into the user's bathroom, providing visual feedback and engagement. Gesture-based interaction allows you to select from a variety of different applications, giving you the freedom to customize your user experience.
