SWT II 2018/19 Final Shared Retrospective

I like…

- the interactivity of the intro exercise
- learning by doing
- Slack presence of teaching team

I wish…

- introduce Devise, Bootstrap, and other dependencies explicitly
- weniger manuell, schneller scaffold
- there was a focus on Rails-Magic (maybe in a lecture?)
- there was an explanation of the principles of Rails (link to the principles of Rails)
- there was a better estimation of progress in the intro exercise
- we used Telegram as a communication tool
- guest lectures were more focused on Agile topics

I wonder…

- how to make the intro exercise be broader and cover more topics
- how to introduce students better to new technologies
- how to introduce students to React
- how to best integrate the idea of "tech leads" in the next SWTII course
- if static assignments of responsibilities are a good way to structure teams
- how to get all devs into a single room, i.e. a "Scrum of Scrums"
